Concept Note

Project name :- GiveHub - A Medicine Redistribution Platform.
submitted by :- Mr. Vaidya Aniket Avinash

Concept

This website is a platform where people can donate and acquire leftover medicines for free. It aims to redistribute unused but viable medicines in a safe and legal way under NGO that is only the NGO can request for Medicine form the Givehub and Doner will donate the medicines at medical stores which are partner with givehub iniciative and then will collected in central hub of givehub and then will redistribute to the NGO inly and while requesting to give hub the NGO will request medicines with letter from doctors of require medicine mention .

The doner will receive a certificate on email after approval from medical store

Motive for selecting this topic

There are several websites that serve as a platform for donating things like clothes, food, money, etc. But we have never heard of a platform where people can do the same for medicines hence, we devised this idea. People tend to dispose leftover medicines and we aim to make a better use of them.

Features

- Medicines are free of cost
- Medicine donation and acquisition
- Search and filter
- Free door to door service
- Certificates as appreciation for donors

Methodology

Database management - Utilizing a secure database to store medication listings, user profiles, and transaction histories.

User Interface Design - Intuitive and user-friendly interface for seamless navigation and interaction.

Collaboration - Partnering with healthcare professionals and NGOs to validate medication safety and efficacy.

Legal Compliance - Adhering to local and international regulations regarding medication donation and distribution.

Development toolkit

Frontend: HTML5, CSS3, JavaScript, Bootstrap.

Backend: MYSQL, Flask / PHP.

Why will the user choose this website?

Users will choose our platform for its simplicity, security, and social impact. It offers a practical solution to both donate surplus medications responsibly and acquire necessary medicines at no cost, fostering a community-driven approach to healthcare access.

Anticipated Outcome

- Reduction of medicine wastage
- Improvement of access to healthcare for marginalized communities
- Fostering a sense of social responsibility among users
- Establishing a sustainable model for medication redistribution
